

DIGITAL HEALTH SERVICES

DHS is a User-friendly, Secure, Safe, Sophisticated ERP Solution to the Hospitals with Powerful Features to Improve Operations, Enhance Patient Care, and Reduce Costs.

Patient Management: Patient registration, bed allocation, and patient discharge. DHS provides a centralized system for managing patient records and allows doctors and nurses to access patient records and provide better care.

Casualty/Emergency OP: DHS provides a separate module for the casualty/emergency department, allowing staff to efficiently manage patient inflow, prioritize medical treatment, and track patient progress.

Medical Investigations and Treatment: DHS facilitates better management of medical investigations and treatment by storing data regarding a patient's medical history, lab test reports, and medication history. This ensures that medical practitioners have easy access to the right information to provide better patient care.

Asset Management: DHS also helps hospitals manage their assets by keeping track of equipment, maintenance schedules, and other asset-related activities. This helps in increasing asset efficiency and reducing downtime.

Inventory Control: DHS enables hospitals track inventory levels, manage supply chains, and ensure that essential supplies are always available. This ensures that the hospital has the necessary supplies to provide timely treatment to patients.

Patient Billing: DHS allows hospitals to manage billing and accounting processes, including invoicing, payments, and financial reporting. This ensures that the hospital's finances are managed efficiently, and payments are made on time.

Operation Theatre Management: DHS provides tools for managing operation theatre schedules, tracking operation progress, and ensuring that medical equipment is available when needed. This helps in increasing efficiency and reducing waiting times for patients.

Sanitation Management: DHS helps hospitals manage sanitation-related activities by scheduling cleaning and disinfection activities, tracking compliance to the ambient indoor air quality standards with sophisticated IoT based sensors, and ensuring that standards are met.

Duty Roster: DHS provides tools for creating and managing staff duty rosters, ensuring that adequate staff are available to manage patient care and support hospital operations.

Time and Attendance Management: DHS also offers tools for tracking employee time and attendance, ensuring that staff are available when needed and reducing absenteeism.

Why Choose DHS ? DHS is designed to meet the unique needs of hospitals, providing a comprehensive solution for managing hospital operations and enhancing patient care. We offer 24/7 support to our customers, ensuring that any issues are resolved quickly and efficiently. Though very user friendly and mobile compatible, our team of experts is always available to support the medical, para-medical and administrative officials of your hospitals.
